WR-1201-JKCH-TD RFoG OBI-Free Node

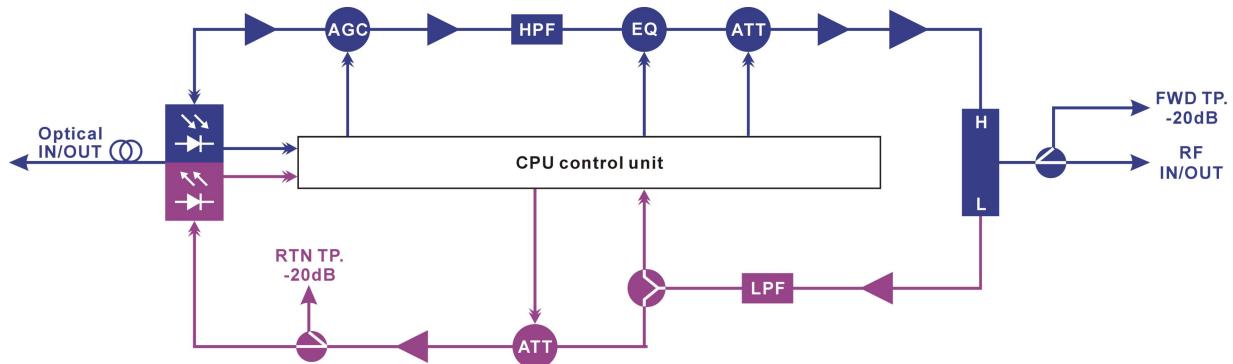

1. Product Overview

WR-1201-JKCH-TD-4CH FTTB Node is mainly used for RFoG network. Its return path laser can work under burst mode. In upstream channel, it can adjust 4 output optical wavelengths (0.5nm stepping). 4 different basic CWDM wavelengths as a group (16 units in total for each carton); the same basic CWDM wavelength is applied to four equipment, set the output wavelength of these equipment with 0.5 stepping accordingly (from 1~4 CH), which can effectively realize OBI free.

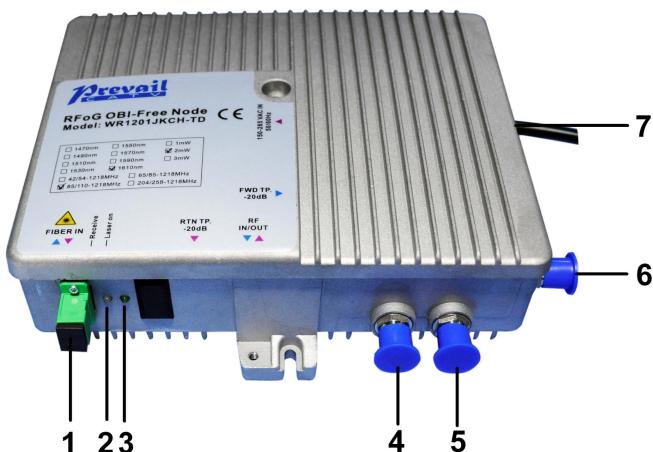

2. Performance Character

- Operating frequency: 5~85/110-1218MHz; support smoothly update on the spot (5~204/258-1218MHz).
- Support optical AGC downstream, whose control range is 0~-5/-6/-7/-8dBm adjustable.
- Adopt electric adjusting mode for both EQ and ATT circuit, using LED displaying screen to modify directly.
- Output wavelength of the return path is adjustable, 4 wavelengths settable with 0.5nm stepping.
- RFoG can be set as burst mode or continuous mode.
- Support DOCSIS 3.1 system and OBI Free.
